

Deltatonin

Introduction:

Deltatonin™ is a patented natural sleep aid extracted from Longan Flower (*Dimocarpus longan*). Unlike most of the sleep-promoting herbs, Longan Flower activates the gene expressions of the Melatonin synthesis pathway. During the day, the body converts tryptophan to serotonin, promoting alertness and a positive mood. At night, the body further converts serotonin to melatonin, which helps facilitate the onset of sleep and promote deep sleep. When the synthesis pathway of melatonin is disrupted, it can lead to depression and insomnia.

endogenous melatonin. By using patented extraction technology, Deltatonin™ can activate the Melatonin synthesis Pathway, promoting the body to produce melatonin naturally. This invention provides a unique strategy for relieving insomnia and solves the issues of dependence on synthetic melatonin and sleeping pills.

Deltatonin™ has showed in Human Clinical trials that induces serotonin and melatonin secretion efficiently and enhances sleep quality within 3 days of consumption.

Longan flower extract can restore the secretion of serotonin and dopamine in animals, and showing better efficacy compared to the commercial anti-anxiety drug.

Taking external Melatonin can cause dependence and inhibit the body's ability to synthesize

Effects:

- Improves Circadian rhythm
- Activates the Melatonin Synthesis Pathway
- Relieves insomnia, anxiety and depression

- Produces a high Melatonin and Serotonin secretion after 3 days of consumption
- Protects microglial cells from oxidative stress and inflammation

Uses:

- Natural sleep support
- Relieve of insomnia, depression and anxiety

Suggested dose:

- 300-400 mg 1 hour before bedtime
